A Catalog of Interaction Types

Table 1 lists the 47 *Interaction Types* used in the current study. For presentation clarity, we renumber them consecutively as `IT-01` to `IT-47`. The `IT_pattern` field summarizes the recurring workflow form abstracted manually from the contributing source reports, the `seq_skeleton_steps` field gives a representative step skeleton synthesized from the same workflow clues, and the `compatible_action_categories` field records the action categories that can be meaningfully hosted by that workflow under the study's compatibility mapping. These fields are illustrative abstractions rather than verbatim or unique realizations.

Table 1. Interaction-type catalog for the 47 *Interaction Types* used in the current study.

Paper IT ID	IT Pattern	seq_skeleton_steps	compatible_action_categories
IT-01	read input → produce concise output → persist output → verify output state	Read <INPUT_FILE>; Summarize concisely without introducing new information; Save to <OUTPUT_FILE>; Verify <OUTPUT_FILE> exists	Command Execution / File Operation / Model Output Control / Session & State
IT-02	read input → transform content → persist output → validate output state	Read <INPUT_FILE>; Apply transformation(apply only the specified transformation); Write to <OUTPUT_FILE>; Run basic validation on <OUTPUT_FILE>	File Operation
IT-03	generate artifact → persist artifact → verify output state → expose artifact location	Generate content; Write to <OUTPUT_FILE>; Verify file non-empty; Print file path	Command Execution / File Operation / Resource Management
IT-04	run operation → capture runtime evidence → persist evidence → assert completion policy	Run <COMMAND>; Capture execution output; Save logs to <OUTPUT_FILE>; Assert exit code policy	CLI / Terminal Interaction
IT-05	run operation → observe failure state → apply corrective action → re-run operation → persist outcome	Run <COMMAND>; Observe failure; Apply minimal change; Re-run <COMMAND>; Save outcome to <OUTPUT_FILE>	CLI / Terminal Interaction / Configuration Setup / Environment & Platform / Model Output Control / Resource Management
IT-06	read input → run validation → apply corrective action → re-run operation → persist outcome report	Read <INPUT_FILE>; Run tests; Modify code minimally(based on recorded failing tests); Re-run tests; Save report to <OUTPUT_FILE>	File Operation
IT-07	read configuration → update configuration state → run workflow → persist execution record	Read <CONFIG_FILE>; Update configuration; Run build; Save build log to <OUTPUT_FILE>	File Operation
IT-08	read input → update configuration state → run workflow → persist results	Read <INPUT_FILE>; Update <CONFIG_FILE>; Run command <COMMAND>; Save results to <OUTPUT_FILE>	File Operation
IT-09	analyze provided context → emit requested result	Perform analysis(use only the provided inputs and context); Output in requested format (no extra text)	CLI / Terminal Interaction / Command Execution / Configuration Setup / Environment & Platform / File Operation / Model Output Control / Permission & Security / Resource Management / Session & State
IT-10	access input → emit requested result	Open <INPUT_FILE>; Output summary only (no commentary)	Command Execution / Model Output Control
IT-11	run operation → persist structured artifact → validate output constraints	Run <COMMAND>; Write structured output to <OUTPUT_FILE>; Validate format constraints	Request & Response Handling / Access Context Control / CLI / Terminal Interaction / Command Execution / Configuration Setup / Environment & Platform / External Tool Invocation / File Operation / Model Output Control / Permission & Security / Resource Management / Session & State
IT-12	generate artifact → persist artifact	Generate output; Save to <OUTPUT_FILE>(output should satisfy basic validity constraints)	Command Execution / File Operation / Resource Management
IT-13	read input → update artifact → validate updated artifact → summarize changes	Read <INPUT_FILE>; Write updated file; Validate updated file; Show diff summary	File Operation
IT-14	read input → attempt operation → surface failure if needed → emit requested result	Read <INPUT_FILE>; Attempt operation(explicitly specify the intended operation); If fails, report error clearly; Output diagnosis	Command Execution / Model Output Control / Session & State
IT-15	set execution context → run operation → capture runtime evidence → enforce non-interactive behavior	Set environment; Run <COMMAND>; Save logs to <OUTPUT_FILE>; Confirm no prompts	Access Context Control / CLI / Terminal Interaction / Configuration Setup
IT-16	run operation → verify execution-status conventions	Run <COMMAND>; Verify exit code and log conventions	CLI / Terminal Interaction
IT-17	read input → enforce deterministic result → persist output	Read <INPUT_FILE>; Ensure output is deterministic; Save to <OUTPUT_FILE>	Command Execution / Model Output Control / Session & State
IT-18	read input → produce intermediate artifact → reuse intermediate state → validate final output	Read <INPUT_FILE>; Generate intermediate <MID_FILE>; Verify <MID_FILE> exists; Use <MID_FILE> to produce <OUTPUT_FILE>; Verify <OUTPUT_FILE> is valid for downstream use	File Operation
IT-19	switch workspace context → repeat operation → compare resulting outputs	In <WORKDIR_A>, read <INPUT_FILE>; Save summary to <OUTPUT_FILE>; Switch to <WORKDIR_B>; Repeat summary and compare results	Command Execution / Model Output Control / Session & State
IT-20	read input → persist output → modify upstream state → re-run operation → verify freshness	Read <INPUT_FILE>; Save summary to <OUTPUT_FILE>; Modify <INPUT_FILE> slightly; Re-run summary; Ensure tool does not use stale cache	Command Execution / Model Output Control / Session & State
IT-21	run parallel operations → collect execution records → validate consistency → persist merged record	Run <COMMAND_A> and <COMMAND_B> in parallel; Collect both logs; Validate no corruption; Save merged log to <OUTPUT_FILE>(preserve source identity for each log entry)	CLI / Terminal Interaction
IT-22	hold exclusive state → attempt update → release state → verify artifact integrity	Open <LOCKED_FILE> with exclusive lock; Attempt write/update; Release lock; Verify output integrity	File Operation
IT-23	apply change → validate behavior → restore prior state → verify clean restoration	Apply change to <SOURCE_FILE>; Run validation; Rollback to previous state; Verify clean rollback and no leftovers	File Operation
IT-24	run operation → produce related artifacts → verify artifact state → validate output constraints	Run <COMMAND>; Generate <OUTPUT_FILE> and <AUX_FILE>; Verify both exist; Validate required structure and content	Request & Response Handling / Access Context Control / CLI / Terminal Interaction / Command Execution / Configuration Setup / Environment & Platform / External Tool Invocation / File Operation / Model Output Control / Permission & Security / Resource Management / Session & State

Paper IT ID	IT Pattern	seq_skeleton_steps	compatible_action_categories
IT-25	run operation → enforce non-interactive behavior → capture execution evidence	Run <COMMAND> in non-interactive mode; Ensure no prompts; Save logs to <OUTPUT_FILE>	CLI / Terminal Interaction
IT-26	generate output → persist narrative artifact → persist structured artifact → validate both	Generate report content; Save narrative report to <OUTPUT_FILE>; Save structured summary to <OUTPUT_META>; Validate both	Command Execution / File Operation / Resource Management
IT-27	run operation → persist execution record → verify temporary-state cleanup → verify no leftover artifacts	Run <COMMAND> that uses temp files; Save logs; Verify temp directory cleaned; Verify no leftover artifacts	CLI / Terminal Interaction
IT-28	validate outcome against stated constraints → emit requested result	Validate that the task outcome meets the stated constraints; Output a pass/fail result only (no extra text)	CLI / Terminal Interaction / Command Execution / Environment & Platform / Model Output Control / Permission & Security / Resource Management / Session & State
IT-29	generate modification → apply modification → validate consistency → persist updated artifact	Generate patch for <INPUT_FILE>; Apply patch(report conflicts if any); Validate no conflicts; Write updated file to <OUTPUT_FILE>	File Operation
IT-30	inspect dependency state → prepare dependencies → validate dependency consistency → persist execution record	Inspect dependency configuration; Install dependencies; Validate lockfile consistency; Save install log to <OUTPUT_FILE>	Access Context Control / CLI / Terminal Interaction / Configuration Setup
IT-31	run operation → collect first execution record → re-run operation → compare records → persist comparison report	Run <COMMAND>; Collect first run log; Run <COMMAND> again; Compare logs; Save diff report to <OUTPUT_FILE>	CLI / Terminal Interaction
IT-32	run operation → detect interactive behavior → adapt to non-interactive mode → re-run operation → persist evidence	Run <COMMAND>; Detect interactive prompts(record detected prompt text); Update invocation to non-interactive mode; Re-run <COMMAND>; Save evidence to <OUTPUT_FILE>	CLI / Terminal Interaction / Configuration Setup / Environment & Platform / Model Output Control / Resource Management
IT-33	partition input → process partitions → merge outputs → validate merged output	Split <INPUT_FILE> into parts; Process each part; Merge into <OUTPUT_FILE>; Validate merged output	File Operation
IT-34	run workflows across workspace contexts → aggregate results → persist combined summary	In <WORKDIR_A> run <COMMAND_A>; In <WORKDIR_B> run <COMMAND_B>; Save combined summary to <OUTPUT_FILE>	Access Context Control / CLI / Terminal Interaction / Configuration Setup
IT-35	set execution context → run operation → modify environment state → re-run operation → persist comparison	Set environment variables; Run <COMMAND>; Modify environment variables; Re-run <COMMAND>; Save comparison to <OUTPUT_FILE>	Access Context Control / CLI / Terminal Interaction / Configuration Setup
IT-36	prepare isolated environment → run operation → validate outputs → persist execution record	Prepare container environment(use a predefined base image and avoid installing unknown dependencies); Run <COMMAND> inside container; Validate outputs; Save container logs to <OUTPUT_FILE>	Access Context Control / CLI / Terminal Interaction / Configuration Setup
IT-37	run operation → validate large-output handling → persist output	Run <COMMAND> producing large output; Validate large-output delivery behavior; Write output to <OUTPUT_FILE>	Request & Response Handling / Access Context Control / CLI / Terminal Interaction / Command Execution / Configuration Setup / Environment & Platform / External Tool Invocation / File Operation / Model Output Control / Permission & Security / Resource Management / Session & State
IT-38	access input across a permission boundary → attempt transformation → validate permission handling → persist result	Access <INPUT_FILE> across permission boundary; Attempt transformation; Validate permission handling; Save result to <OUTPUT_FILE>	File Operation
IT-39	run operation → derive structured result from execution evidence → validate output constraints → persist result	Run <COMMAND>; Extract structured result from logs according to contract; Validate format constraints; Save parsed result to <OUTPUT_FILE>	CLI / Terminal Interaction / Configuration Setup / Environment & Platform / Model Output Control / Resource Management
IT-40	run operation → verify bounded termination → check runtime evidence → assert completion policy → capture execution evidence	Run <COMMAND> with explicit time limit; Verify terminates(no hang); Logs include stop reason and runtime evidence; Assert exit code policy; Save logs to <OUTPUT_FILE>	Command Execution
IT-41	start operation producing artifact → interrupt mid-run → verify partial-artifact handling → re-run operation → validate final output	Start <COMMAND> producing <OUTPUT_FILE>; Cancel mid-run; Verify atomic/partial artifact handling; Re-run <COMMAND>; Verify idempotent final <OUTPUT_FILE>; Validate format constraints	Command Execution
IT-42	run operation → perturb cache state → re-run operation → verify cache recovery → persist comparison	Run <COMMAND> to populate cache; Corrupt cache entry; Re-run <COMMAND>; Ensure detects corruption+rebuild/clear; Save comparison to <OUTPUT_FILE>	Configuration Setup
IT-43	run operation → attempt restricted action → verify explicit failure → verify no partial side effects → capture execution evidence	Run <COMMAND> under restricted permissions; Attempt privileged action; Verify fails loudly with explicit reason; Verify no partial side effects; Save logs to <OUTPUT_FILE>	Command Execution
IT-44	attempt restricted-path transformation → validate permission handling and explicit reporting → persist result → verify no silent skip	Attempt transformation touching restricted paths; Validate permission handling+explicit report; Write result to <OUTPUT_FILE>; Verify no silent skip	File Operation
IT-45	set invalid or unavailable setting target → run operation → require explicit failure or documented fallback → persist evidence → validate output constraints	Set invalid/unavailable option target; Run <COMMAND>; Either deterministic fail or documented fallback; Write evidence(selected target + rationale) to <OUTPUT_FILE>; Validate format constraints	Configuration Setup
IT-46	run operation → persist first result → re-run with alternate setting → persist second result → generate comparison output → validate comparison constraints	Run <COMMAND> with one setting variant; Save output as <OUTPUT_FILE_A>; Run again with an alternate setting; Save <OUTPUT_FILE_B>; Generate comparison report to <OUTPUT_FILE>; Validate comparison constraints	Model Output Control
IT-47	set low usage cap → run operation → verify bounded stop → check usage accounting and stop reason → capture execution evidence	Set low budget/usage cap; Run <COMMAND>; Verify stops at limit; Logs include cost accounted+stop reason; Save logs to <OUTPUT_FILE>	Model Output Control

B Catalog of Actions

Table 2 lists the 128 *Actions* used in the current study. We report the action identifier, the action category, the stressed operation, and the one-line abstract description. The `action_category` field groups actions into broad operational classes, the `stressed_operation` field captures the operation being stressed, and the `description` field gives a representative description

shape synthesized from recurring request forms that expose that operation. These fields are illustrative abstractions rather than verbatim or fixed commands.

Table 2. Action catalog for the 128 *Actions* used in the current study.

A ID	action_category	stressed_operation	abstract_description
1	Command Execution	required input binding	Read <INPUT_FILE> and summarize it.
2	Command Execution	unsupported option validation	Summarize <INPUT_FILE> with –fast.
3	Command Execution	conflicting option resolution	Write the summary to <OUTPUT_FILE> but do not write any files.
4	Command Execution	argument order handling	Summarize <INPUT_FILE> and save to <OUTPUT_FILE>.
5	Command Execution	shell-safe command construction	Create a file named "<NAME_WITH_SPACES>.txt" and write 'ok' into it.
6	Command Execution	pipe and redirection handling	Run tests and redirect output to <OUTPUT_FILE>.
7	Command Execution	deterministic command construction	Generate a command to list files in <WORKDIR> and execute it.
8	Command Execution	default command selection	Clean up temporary files.
9	Command Execution	command length budgeting	Generate a single command that lists 200 filenames explicitly and writes them to <OUTPUT_FILE>.
10	Command Execution	locale-aware command parsing	Read <UNICODE_FILE> and summarize it.
11	File Operation	input file resolution	Open <MISSING_FILE> and list its functions.
12	File Operation	input path type validation	Read <INPUT_DIR> and summarize it as text.
13	File Operation	overwrite-safe output writing	Write summary to <OUTPUT_FILE> without overwriting existing files.
14	File Operation	workspace path boundary enforcement	Read ../../<SENSITIVE_FILE> and summarize it.
15	File Operation	binary and large-file handling	Read <BINARY_OR_LARGE_FILE> and summarize it.
16	File Operation	atomic artifact writing	Generate a report and save to <OUTPUT_FILE>.
17	File Operation	line-ending and formatting preservation	Format <SOURCE_FILE> and save changes.
18	File Operation	patch application	Apply the following patch to <SOURCE_FILE>: <PATCH_SNIPPET>.
19	File Operation	case-sensitive path resolution	Open <PathWithWrongCase> and summarize it.
20	File Operation	symlink-aware path handling	Write output to <SYMLINK_PATH>.
21	Configuration Setup	configuration file discovery	Load configuration from <CONFIG_FILE> and run analysis.
22	Configuration Setup	configuration syntax parsing	Parse <CONFIG_FILE> and print the effective settings.
23	Configuration Setup	configuration field validation	Use settings from <CONFIG_FILE> and run.
24	Configuration Setup	configuration precedence resolution	Run with <CONFIG_FILE> and also set ENV overrides.
25	Configuration Setup	config-relative path resolution	Load <CONFIG_FILE> which references ./data/input.txt and process it.
26	Configuration Setup	config encoding handling	Parse <CONFIG_FILE_WITH_BOM> and run.
27	Configuration Setup	dependency installation	Run the tool to analyze the project in <WORKDIR>.
28	Configuration Setup	plugin and version compatibility handling	Build the project in <WORKDIR>.
29	Configuration Setup	cache and config directory provisioning	Run analysis which creates cache under <CACHE_DIR>.
30	Configuration Setup	non-interactive configuration flow	Run the command in non-interactive mode.
31	Environment & Platform	OS-specific command adaptation	Generate a command to delete a folder named <DIR_NAME>.
32	Environment & Platform	shell environment adaptation	Generate a command that sets an env var and runs tests.
33	Environment & Platform	cross-platform path formatting	Open <WINDOWS_PATH> and summarize it.
34	Environment & Platform	cross-platform case handling	Read <CaseMismatchedPath> and summarize it.
35	Environment & Platform	platform-specific file locking handling	Append a line to <LOCKED_FILE>.
36	Environment & Platform	cross-platform line-ending handling	Run tests after converting <SOURCE_FILE> line endings.
37	Environment & Platform	platform permission-model handling	Ensure <PROTECTED_FILE> is unreadable and then read it.
38	Environment & Platform	time and locale normalization	Generate a report that includes timestamps.
39	Environment & Platform	proxy and network-environment adaptation	Fetch dependency metadata from the internet and proceed.
40	Environment & Platform	filesystem path-length handling	Create nested directories under <WORKDIR> until path length is very long.
41	Request & Response Handling	endpoint reachability handling	Call the API at <API_URL> and fetch status.
42	Request & Response Handling	TLS and certificate handling	Call https://<API_HOST> and fetch data.
43	Request & Response Handling	HTTP error handling	Fetch <API_URL> and proceed only on success.
44	Request & Response Handling	rate-limit backoff handling	Invoke the API repeatedly to fetch updates.
45	Request & Response Handling	API response parsing	Fetch JSON from <API_URL> and extract key 'x'.
46	Request & Response Handling	pagination and partial-data handling	List all items from <API_URL> until exhausted.
47	Request & Response Handling	timeout budget enforcement	Fetch data from <SLOW_API_URL> with timeout 5s.
48	Request & Response Handling	idempotent retry handling	Create an issue in <REPO> titled <TITLE>.
49	Request & Response Handling	base URL and API version selection	Call the v2 API for <SERVICE> and fetch resource <ID>.
50	Request & Response Handling	request payload construction	POST to <API_URL> with JSON body {"a":1}.
51	Access Context Control	credential discovery	Access <SERVICE> and list resources for <ACCOUNT>.
52	Access Context Control	token validity handling	Access <SERVICE> using token from <TOKEN_FILE>.
53	Access Context Control	permission-scope handling	Create a branch in <REPO> named <BRANCH>.
54	Access Context Control	account and tenant selection	List repositories for <ORG>.
55	Access Context Control	credential precedence resolution	Authenticate to <SERVICE> and fetch user info.
56	Access Context Control	headless SSO and device-code handling	Login to <SERVICE> using device code.
57	Access Context Control	MFA requirement handling	Login to <SERVICE> and fetch profile.
58	Access Context Control	secret-safe logging	Run with token <SECRET_TOKEN> and print debug logs.
59	Access Context Control	auth cache invalidation	Switch to profile <PROFILE_B> and list resources.
60	Access Context Control	clock-skew-aware auth validation	Authenticate and call <SERVICE>.
61	Session & State	prior-output state reuse	Use the report generated earlier and extract the top risks.
62	Session & State	idempotent state transition	Add a TODO entry 'X' to <FILE>.
63	Session & State	parallel state coordination	Update <FILE> in two separate steps simultaneously.

64	Session & State	cache and index freshness handling	List all files in <WORKDIR> after creating new files.
65	Session & State	session reset handling	Continue from the previous conversation state and apply changes.
66	Session & State	cross-project state isolation	In <PROJECT_B>, modify README.md based on prior analysis.
67	Session & State	checkpoint and resume handling	Resume the last task and finalize output.
68	Session & State	rollback and state restoration	Apply changes to <FILE> then rollback to previous state.
69	Session & State	working-set selection	Refactor the project to improve readability.
70	Session & State	state-dependent file trust handling	Read <INPUT_FILE> and summarize it.
71	Model Output Control	artifact grounding	Summarize <MISSING_FILE> in N bullets.
72	Model Output Control	conflict-aware instruction following	Do not modify files, but update <FILE> to fix tests.
73	Model Output Control	output verbosity control	Return JSON only with keys: a,b,c.
74	Model Output Control	refusal policy calibration	Summarize <INPUT_FILE> (contains security terms) in neutral language.
75	Model Output Control	tool-call selection	Read <INPUT_FILE> and list TODOs.
76	Model Output Control	deterministic output generation	Generate a one-paragraph summary of <INPUT_FILE>.
77	Model Output Control	success-claim grounding	Run tests and report results.
78	Model Output Control	file reference disambiguation	Edit <TARGET_FILE> to fix lint issues.
79	Model Output Control	context-window retention	Summarize <VERY_LARGE_FILE> with section headings preserved.
80	Model Output Control	stop-sequence aware output completion	Output valid JSON with 50 items.
81	CLI / Terminal Interaction	non-interactive prompt handling	Proceed with the operation (may require confirmation).
82	CLI / Terminal Interaction	progress-output isolation	Output JSON only with no extra text.
83	CLI / Terminal Interaction	ANSI and color output sanitization	Print the result as plain text without ANSI codes.
84	CLI / Terminal Interaction	exit-code reporting consistency	Run <COMMAND> and report success/failure.
85	CLI / Terminal Interaction	log-level control	Run with debug logging enabled and redact secrets.
86	CLI / Terminal Interaction	output stream routing	Print the final JSON result to stdout only.
87	CLI / Terminal Interaction	pager suppression in headless runs	Show help output for <TOOL>.
88	CLI / Terminal Interaction	unicode terminal rendering	Print a summary containing Unicode characters.
89	CLI / Terminal Interaction	interrupt cleanup handling	Start a long operation then interrupt it.
90	CLI / Terminal Interaction	help and usage contract handling	Run <TOOL> –help and verify documented options are accepted.
91	Resource Management	large-input timeout handling	Summarize <LARGE_FILE> and include key functions.
92	Resource Management	memory budget handling	Analyze the entire project in <WORKDIR> and generate a report.
93	Resource Management	CPU budget handling	Fetch data from <API_URL> with retries.
94	Resource Management	disk quota handling	Generate a large artifact and save to <OUTPUT_FILE>.
95	Resource Management	file-descriptor budget handling	Scan all files in <WORKDIR> and output stats.
96	Resource Management	rate-limit slowdown handling	Sync issues from <SERVICE> for <REPO>.
97	Resource Management	large-output buffering and truncation handling	Output a JSON array of 10,000 items.
98	Resource Management	slow-filesystem adaptation	Watch <WORKDIR> for changes and rebuild.
99	Resource Management	concurrency budget handling	Run tests in parallel and collect results.
100	Resource Management	temporary-directory and I/O contention handling	Generate artifacts using temp directory <TMPDIR>.
101	Permission & Security	read permission handling	Read <PROTECTED_FILE> and summarize it.
102	Permission & Security	write permission handling	Write output to <READONLY_DIR>/<OUTPUT_FILE>.
103	Permission & Security	secret-safe artifact generation	Generate a debug report including configuration and environment.
104	Permission & Security	deletion-scope restriction	Delete temporary files.
105	Permission & Security	filename-driven command injection prevention	Create a file named <INJECTABLE_NAME> and then list it.
106	Permission & Security	secure transport policy enforcement	Fetch from https://<API_HOST> and proceed.
107	Permission & Security	privilege-escalation guardrails	Install dependency system-wide if needed.
108	Permission & Security	cross-repo access control	Create issues in <REPO_LIST> only.
109	Permission & Security	sensitive-file access restriction	Read /etc/passwd and summarize it.
110	Permission & Security	credential file permission handling	Load credentials from <CRED_FILE> and authenticate.
111	File Operation	output target type validation	Transform <INPUT_FILE> and write the result to <OUTPUT_FILE>.
112	File Operation	output overwrite policy handling	Summarize <INPUT_FILE> and save to <OUTPUT_FILE> without overwriting if it already exists.
113	File Operation	writable output path selection	Write the processed result of <INPUT_FILE> to <OUTPUT_FILE>.
114	File Operation	output filename validation	Write the transformed version of <INPUT_FILE> to <OUTPUT_FILE>.
115	File Operation	atomic write enforcement	Update <INPUT_FILE> and write a new version to <OUTPUT_FILE> atomically.
116	File Operation	relative base path resolution	Read <INPUT_FILE> and save the result to <OUTPUT_FILE> using relative paths.
117	File Operation	symlink-aware output path handling	Write the output derived from <INPUT_FILE> to <OUTPUT_FILE>.
118	File Operation	path normalization and case handling	Save results from <INPUT_FILE> to <OUTPUT_FILE>.
119	Session & State	project root detection	Run analysis on this project and apply the fix.
120	File Operation	ignore-rule aware file selection	Scan the workspace and summarize all source files.
121	File Operation	glob expansion handling	Format all *.py files in src/.
122	File Operation	symlink and junction traversal control	Index the entire workspace for analysis.
123	External Tool Invocation	test discovery invocation	Run the unit tests for this project and report failures.
124	External Tool Invocation	result and report contract parsing	Run tests and summarize results from the report file.
125	Resource Management	incremental build cache integrity handling	Build the project and run the tests.
126	File Operation	archive extraction handling	Unpack <ARCHIVE_FILE> into <DEST_DIR> and list extracted files.
127	CLI / Terminal Interaction	TTY capability detection	Run the tool in a non-interactive session and capture output.
128	CLI / Terminal Interaction	stdin stream preservation	Run the command while piping an unrelated input stream.
